

Watertown Tobacco Free Coalition:

The mission of the Watertown Tobacco-Free Coalition is to create a heightened sense of awareness and urgency surrounding tobacco use and abuse issues; while enabling the community to utilize existing and develop new resources to promote healthy lifestyles.

The Dangers of Secondhand Smoke:

Secondhand smoke (SHS) is the smoke that is inhaled from other people's tobacco smoke from cigarettes, pipes, or cigars. There are two kind of SHS that a person can breathe in:

- ♦ **Mainstream Smoke**
The smoke inhaled by a smoker
- ♦ **Sidestream Smoke**
The smoke from the burning tip of a cigarette
- ♦ Other common names for secondhand smoke include **environmental tobacco smoke (ETS)** and **passive smoke**.

Secondhand smoke contains over 4,000 chemicals. Of these chemicals, 200 are poisons and 43 are carcinogens. These carcinogens are known to cause cancer in humans and animals and many are strong irritants.

Did you know?

- ♦ Four out of five restaurant patrons are non-smokers.
- ♦ Studies have shown no loss in sales in restaurants that have become smoke-free.
- ♦ Food service workers in restaurants have 50% greater risk of developing lung cancer due to second hand smoke.
- ♦ Offering a smoke-free environment can reduce cleaning costs and property damage.

A few of the numerous health effects of secondhand smoke on children include:

- ♦ Asthma
- ♦ Bronchitis and pneumonia
- ♦ Ear infections
- ♦ Lower respiratory tract infections
- ♦ Cancers and leukemia
- ♦ Sudden Infant Death Syndrome
- ♦ Adverse impact on learning and behavioral development

Some people argue that non-smoking areas with proper ventilation will take care of the problem of SHS. The fact remains that there is no safe level of exposure. No ventilation system can eliminate health risks due to secondhand smoke. Science shows that the only solution to address the health risk of SHS is smoke-free air.

A mother that smokes during or after her pregnancy can irreversibly impact her child's growth and development.

Some of the well known ingredients of cigarette smoke include:

- ♦ Formaldehyde (embalming fluid)
- ♦ Cyanide (gas chambers)
- ♦ Arsenic (found in rat poison)
- ♦ Carbon Monoxide (car exhaust)
- ♦ Methanol (rocket fuel)
- ♦ Benzene (gasoline additive)

The Environmental Protection Agency classifies secondhand smoke as a Group A carcinogen, which means it is a known cause of lung cancer in humans. Group A carcinogens are the most dangerous cancer-causing agents and there is no safe level of exposure to secondhand smoke.
